

Frontend Research

- Deadline : 19-03-2026
- Slide or Github readme with source repo code

1. Sorn Sophamarinet — UI Components & Design System

Responsibility

Build the base UI system for the whole platform.

Examples:

- buttons
- forms
- dialogs
- dropdowns
- tables
- layouts
- dashboard UI
- Tools to research
- Radix UI
- shadcn/ui
- TailwindCSS
- Headless UI
- Ant Design ...

should test

Create demo pages:

```
Dashboard layout
Project list page
Deploy modal
Create project form
Settings page
```

Expected result:

```
UI component library for the project
Reusable components
Theme system (dark/light)
```

2. Va Eric - Graph & DevOps Visualization

This is very important for your platform.

Responsibility

Visualize:

- service topology
- deployment pipeline
- architecture diagrams
- Tools to research
- React Flow
- JointJS
- D3.js
- Recharts
- What this member should build

Prototype:

```
Deployment pipeline graph
Service dependency graph
Microservice topology
```

Example UI

```
API Gateway
  |
User Service --- Auth Service
  |
Payment Service
```

Expected result:

```
graph visualization system
node-based architecture editor
pipeline UI
```

3. Korm Tanigan — Animation & Interaction

Responsibility

Make the UI feel modern and dynamic.

Examples:

- loading animations
- deployment progress animation
- page transitions
- notifications

- success effects
- Tools to research
- Motion
- GSAP
- Lottie
- react-canvas-confetti

Should test

Prototype animations:

```
Deploy progress animation
Success deploy confetti
Pipeline step animation
Modal transitions
```

Expected result:

```
animation system
UI transitions
deployment status animation
```

4. Toch Ratana — Data, State Management & Utilities

Responsibility

Handle data flow and API communication.

Examples:

- fetching deployment status
- caching
- global state
- forms
- date formatting
- Tools to research
- TanStack Query
- Zustand
- React Hook Form
- Zod
- date-fns

Should test

Prototype features:

```
fetch project list  
deploy status updates  
form validation  
real-time logs
```

Expected result:

```
data fetching layer  
state management pattern  
form system
```
